Portfolio

Pauseplay | Full-Stack Engineer | Live • Github

Single page web app for streaming music
- Designed a RESTful Rails API to serve a single page web app in conjunction with a PostgreSQL database
- Constructed front-end views using React.js with a Redux architecture to componentize the views
- Incorporated HTML5 audio with React Player to give users an uninterrupted music stream
- Used CSS and Javascript to customize the look and feel of the audio player
- Built a session authentication system, hashing passwords with BCrypt to ensure a high level of DB security

Cosmic Bubble | Front-End Engineer | Live • Github

Browser game where players must strive to become the largest bubble in the universe
- Followed JavaScript OOP design and prototypal inheritance to generate user and enemy bubbles from common moving object class
- Engineered a collision detection algorithm to interact with rendered objects
- Generated dynamic gameplay in a HTML5 Canvas element by utilizing vector math for game state updates

ziva | Front-End Engineer | Live • Github

Portfolio website for Chicago based Indian Bridal Boutique
- Collaborated with a UI designer from Chicago to implement best design principles
- Utilized Google Maps API to pinpoint address and display to users
- Website increased appointment bookings by over 40% in first week after launch
